sustainable options

We believe that investing in sustainability is not only a moral and ethical imperative, but a sound business decision.

To that end, we have implemented initiatives based on a written policy starting in 2018 to better serve both the planet and our customers.

Our environmental initiatives span these 4 primary categories:

1. **post consumer recycled plastic (pcr)**
PCR plastic reduces energy use, solid waste, and CO2 emissions by 50-80% compared to virgin plastic
2. **bio based plastic**
Plant based byproducts (primarily corn and rice husk), represent a significant portion of the package, reducing petroleum based plastic usage
3. **reusable & refillable products**
Create beautiful outer packaging with recyclable / recycled refill cartridges
4. **recyclable products**
Avoiding styrene and using single materials that can be recycled after use without contaminating streams
